**CONTROL MODULE AND CNC COMPUTER INTEGRATION TEAM UP TO
DELIVER PERFORMANCE MANAGEMENT SOLUTIONS FOR
MANUFACTURERS**

Combined Technology Delivers Employee and Equipment Measurement; Drives
Performance and Pricing Optimization

ENFIELD, CT, June 6, 2005 – Control Module Inc. (CMI), the leading workforce management technology provider, and CNC Computer Integration, the leader in wireless equipment integration, today announced a collaborative agreement to deliver manufacturers the ability to measure employee performance and increase revenue.

Using Control Module’s secure data collection terminals as an interface for monitoring employee performance and WireFreeCNC technology for measuring machine output data, manufacturing industry executives for the first time, have the intelligence necessary to authenticate users, as well as measure and improve productivity. This valuable information creates the ability to accurately calculate job costs and develop profitable budgets for upcoming projects. Wireless connectivity eliminates the use of cable runs that can be costly and interfere with equipment, such as overhead cranes.

“By using Control Module’s high reliability, easy-to-deploy workforce management terminals in conjunction with WireFreeCNC technology, we are able to deliver our customers powerful tools to ensure profitability,” said John Carpenter, President, CNC Computer Integration. “Manufacturers no longer need to leave money on the table because they can accurately assess output and maximize productivity.”

“We found that by adding WireFreeCNC technology to Control Module’s secure data collection terminals, manufacturers gained the maximum flexibility for adding terminals to their systems, wherever they were needed,” said Jana Moak, President & CEO, Control Module. “Manufacturers now have complete control over how they measure employee performance and the subsequent profits they gain as a result.”

ABOUT CNC COMPUTER INTEGRATION

CNC Computer Integration, LLC pioneered the concept of 'WireFreeCNC' or connecting computer numerical controlled machines to computers wirelessly. This privately held company was founded in 2002 and is located in Ellington, CT. Visit us at www.wirefreecnc.com.

ABOUT CONTROL MODULE

Control Module is the leading workforce management provider, offering biometrics and other technology solutions for enabling the secure automation of time and attendance and access control. With over 30 years of experience, continuous financial growth and a strong history of innovation, Control Module delivers workforce management technology to companies around the world, including 160 of the Fortune 500, as well as small-to-medium sized enterprises across a variety of industries.
